

Streamlined to Perform

The new MB bucket crusher from MB SpA is the new version of an earlier model and comes with several advantageous features.

MB SpA, a Vicenza company and world leader in the production and sales of bucket crushers, recently launched its latest product, a new bucket crusher. The company decided to present this new product during the Intermat trade fair in Paris, one of the most important international trade fairs in the sector of construction, which was held in April 2009.

MB SpA is committed to the constant satisfaction of customers' requirements, ever attentive to their needs, carefully listening to all problems faced every day on construction sites and finding solutions most suited to the various international situations in which the company operates. At the Intermat fair, MB SpA presented a historical product of the MB house, though in a modernised version. The traditional model of bucket crushers offered by the company has been streamlined to offer an even more revolutionary product, as a result of the in-depth research of the MB team and technical engineers. The new version of the bucket crusher is, in fact, more resilient at work, featuring a more compact size and improved structural layout to facilitate operator manoeuvres on the excavator.

Despite the world crisis affecting all sectors, MB confirms its success and keeps on investing in research and development, giving priority to vertical specialisation in the production of a single product that enables the guarantee of high quality and top performing bucket crushers. The new MB crusher is proof of that.
