MB S.p.A.

MB S.p.A., a Vicenza-based company and leader in the production and sales of bucket crushers, presented its latest product, a new bucket crusher at this year's Intermat. This new crusher is the result of ongoing investment in technological research and continuous attention to customers' needs.

The historical bucket crusher model has been transformed to offer a revolutionary product. The company is committed to the constant satisfaction of customers' requirements, listening to the problems faced every day on construction sites and finding solutions most suited to the various situations in which MB S.p.A. operates. It is also thanks to the long-lasting relationships and loyalty of its clients that MB can produce bucket crushers that represent a valid work tool. The new version of the bucket crusher is more wear resistant, is more compact and has an improved structural layout to facilitate operator manoeuvres on the

excavator.

Despite the world economic crisis, MB confirms its success and maintains its investment in research and development, giving priority to vertical specialisation in the production of a single product that enables the guarantee of high-quality and top-performing bucket crushers.
