

MB S.p.A. - Worldwide Leader in Crusher Buckets Makes its Foray into India

The name MB has become synonymous with crusher buckets, in many parts of the world. M.B S.p.A, has carved a niche of its own, as the worldwide leader in the production and sale of crusher buckets. The company has through its product innovations become one of the leading names in the earth moving industry. MB has now made forays into the rapidly growing Indian market.

MB offer a wide array of bucket crushers, suited for excavators ranging in weight from 8 tonnes to over 28 tonnes. While the company is well known for its crusher buckets, its other offerings include the iron separator and its latest innovative product, the MB Universal Quick Coupling.

Applications

Crusher buckets produced by MB find wide ranging applications. Some of them include :

- Demolition ➤ Roadworks ➤ Excavation
- Quarrying ➤ Mining ➤ Breaking up of vineyard soil ➤ Environmental reclamation

Hyderabad - Bangalore Highway Project

Crusher buckets from MB will be widely used in the Hyderabad- Bangalore Highway project. The highway project which will have 3 lanes on both the sides, will cover around 600 kms and is expected to ease the running time between these two fast growing metropolitan cities. The use of the crusher buckets is expected to significantly reduce the operational costs, when compared to the traditional crushers, since they can be easily fitted and are highly compatible with the modern day hydraulic system found in the latest excavators. Bucket crushers from MB S.p.A also help in reducing waste disposal costs, thereby having a direct impact on the reduction of

project cost. The inert materials that will be produced during the project are expected to be recycled.

Universal Quick Coupling

MB S.p.A is a name that has always been associated with technology initiatives. The company's growth has been fueled by its strong R & D focus , which has led to several product innovations. The Universal Quick Coupling , is another testimonial to the indigenous capabilities of MB S.p.A in coming out with products that have been designed keeping the unique needs of excavators.

Depending on the excavator and the pin on which it is assembled, the universal quick coupling is available in seven different versions. The universal quick coupling enables quick attachments of a variety of equipment including the crusher bucket, hammer, traditional bucket or drill, in quick time, as the name suggests. The entire installation process is simple, hardly taking a few minutes, thereby considerably improving construction process efficiency.

One of the salient features of the universal quick coupling is its ability to improve the pick-up geometry. The coupling enables the reduction of distance between the excavator arm and the equipment that is being attached to it. This enables work to be carried out faster, saving precious time. The universal quick coupling also helps in reduction of weight by more than 50 percent when compared to the traditional couplings available in the market. While traditional couplings weight around 150 kgs, Universal Quick Couplings weigh only about 80 kgs. This helps to reduce the strain on the excavator, thereby optimizing its performance.
