

New universal quick coupling from MB

Vicenza-based MB SpA, producers of crusher buckets has invented a new accessory: the universal quick coupling.

Available in seven versions, depending on the excavator and the pin on which it is assembled, the new universal quick coupling can be used with all kinds of equipment from the crusher bucket to the hammer, the traditional bucket to the drill, to the same excavator, with very short installation times.

This new product therefore improves pick-up geometry by reducing the distance between the excavator arm and the equipment used, thus speeding up the jobs carried out on site. The strain on the excavator is also diminished, with a reduction of more than 50% of the weight compared to traditional couplings offered: the new universal quick coupling weighs about 80kg, compared to the 150kg

of couplings available today on the market.
